

Wards (2011-Present Configuration) reported using 2013 US Census American Community Survey 5-year Block Groups Data[^]

Ward	Median Household Income in the Last 12 Months
1	\$18,837.87
2	\$44,732.40
3	\$42,179.44
4	\$84,375.36
5	\$74,141.90
6	\$31,500.25
City	\$43,262.00

* Block groups do not neatly fit within ward geographies and may overlap into other wards or unincorporated areas. See included map. This makes block group level data, the best resolution in the American Community Survey data products, challenging to use with Columbia's wards. For this reason, these data are better used for normalized averages rather than total counts. The 2010 population figures based on Census Blocks remain the best data for population counts.

[#] The American Community Survey reports education for the population aged 25 years and over as number for the block group. For the issues noted above, such reporting makes it challenging to give accurate figures for wards with overlapping block groups. To account for this, percentages were calculated from the source data and averaged by ward. Data comes from a limited sample population and is found in table B15003.
