Please comment on what you like or dislike about the proposed development.

I really like the trail connectors and using Pednet to help fund the project. The solar/wind energy to power lights and the water pump is a fabulous idea since this park is so far out of the way. The edible trees are a great idea. I am glad you all will put signs informing the public of the edible trees and harvesting tips. Cleaning that pond is definitely a must. Aeration to maintain a healthy water ecosystem is also a must.

I do like the trail connecting the two neighborhoods. I also like how this park is involved in nature. The bond is a very nice attraction also.

What additions or what changes would you like to see for the proposed development?

In section 8 (native grasses) it would be nice for bird houses (blue bird) to be scattered through the grassland. Maybe a bench or two for observing this area with a posted description of the plants and wildlife. A guide of all the edible plantings in Columbia parks and harvest times would be awesome.

I do not recommend any changes. This park looks very suitable for the city and would be a good attraction.
