1.0 INTRODUCTION

This *2019 Annual Groundwater Monitoring and Corrective Action Report* (Report) was prepared by Burns & McDonnell on behalf of Columbia Water & Light Department (CWLD) to present groundwater monitoring activities performed in 2019 at the existing utility's former inactive coal combustion residuals (CCR) surface impoundment (known locally, and hereinafter referred to as, "More's Lake") located at CWLD's City of Columbia Municipal Power Plant (CMPP or Site) in Columbia, Missouri. The former inactive CCR surface impoundment was certified as closed in February of 2020 (discussed further in Section 6).

This Report has been prepared to support compliance with the groundwater monitoring requirements of United States Environmental Protection Agency's (USEPA's) published *Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals (CCR) from Electric Utilities; Final Rule*, 40 Code of Federal Regulations (CFR) § 257 and 261, dated April 17, 2015 (USEPA, 2015) (Final Rule), and the updated Final Rule *Extension of Compliance Deadlines for Certain Inactive Surface Impoundments; Response to Partial Vacatur* published August 5, 2016 (USEPA, 2016) with new provisions for inactive CCR surface impoundments under 40 CFR 257.90(a) and 40 CFR 257.100(e). The updated Final Rule (USEPA, 2016), removed the effects of "early closure" provisions for inactive CCR surface impoundments. With this rule change, inactive CCR surface impoundments must comply with groundwater monitoring and reporting requirements set forth in the Final Rule that were previously applicable to only existing/active CCR surface impoundments.

This Report follows the initial *Annual Groundwater Monitoring Report* prepared by Burns & McDonnell dated July 29, 2019 (Burns & McDonnell, 2019c) that presented groundwater monitoring activities at the Site in 2017 through March 2019. This 2019 Report will present groundwater monitoring activities in 2019.

Groundwater monitoring activities completed to date at the Site from 2017 through 2019 included:

- The establishment of a groundwater monitoring well network in accordance with Final Rule requirements;
- Hydraulic conductivity testing at each of the wells included in the More's Lake monitoring well network;

- Routine gauging of Site monitoring wells to assess the direction of groundwater flow beneath the More's Lake;
- Collecting and analyzing at least eight rounds of groundwater samples from each of the nine wells included in the More's Lake well network prior to April 17, 2019 for analysis of Appendix III and Appendix IV parameters in accordance with 40 CFR §257.94(b) and additional Missouri Department of Natural Resources (MDNR) water quality parameters to establish background concentrations;
- Initiating evaluation of groundwater monitoring data for statistically significant increases (SSIs) over background levels for constituents listed in Appendix III of 40 CFR §257, as required by 40 CFR §257.94 and include the additional MDNR water quality parameters (Burns & McDonnell, 2019c); and
- Establishing and implementing an Assessment Monitoring Program (Burns & McDonnell, 2019d); and
- Developing Groundwater Protection Standards (GWPSs) for Assessment Monitoring constituents (Burns & McDonnell, 2019e).
- Collecting and analyzing groundwater samples for Assessment Monitoring events in August 2019 and December 2019.

1.1 Purpose and Scope

This Report presents groundwater monitoring activities and results for 2019 at More's Lake and has been prepared in accordance with the annual groundwater monitoring and corrective action report requirements presented in 40 CFR §257.100(e)(5) and §257.90(e), which states:

“For [inactive] CCR surface impoundments, no later than [August 1, 2019], and annually thereafter, the owner or operator must prepare an annual groundwater monitoring and corrective action report.”

“For the preceding calendar year, the annual report must document the status of the groundwater monitoring and corrective action program for the CCR unit, summarize key actions completed, describe any problems encountered, discuss actions to resolve the problems, and project key activities for the upcoming year.”

This Report provides an account of 2019 groundwater monitoring activities performed in accordance with the *Groundwater Monitoring Plan for More's Lake* (Burns & McDonnell, 2019f) (GMP) that includes the *Groundwater Sampling and Analysis Plan for More's Lake* (Burns & McDonnell, 2018a) (SAP) as Appendix A to the GMP.

1.2 Facility Description and History

The CMPP facility is owned and operated by the CWLD. The CMPP is located at 1501 Business Loop 70 East, Columbia, Missouri in Boone County, Missouri, illustrated in Figures 1-1 and 1-2. The CMPP facility occupies approximately 25.4 acres and is situated in the Southeast $\frac{1}{4}$, of the Southwest $\frac{1}{4}$, of Section 6, in Township 48 North, Range 12 West, at a latitude of 38.964917° N and longitude of 92.317027° W.

Land use adjacent to the CMPP is residential to the east and is mixed industrial, commercial, and residential to the north, west, and south (Figure 1-2). The CMPP is located approximately 950 feet (0.18 miles) east of an unnamed intermittent tributary of Bear Creek, about 2,150 feet (0.41 miles) northwest of an unnamed intermittent tributary of Hinkson Creek, and approximately 5,750 feet (1.09 miles) northeast of Flat Branch Creek. Bear Creek and Hinkson Creek are approximately 4,100 feet (0.78 miles) northwest and 4,500 feet (0.85 miles) southeast of the CMPP, respectively.

The CMPP has one CCR unit that is comprised of an inactive surface impoundment that formerly received CCR from facility operations. The original surface impoundment, known locally as More's Lake, was constructed as a farm pond no later than 1896, prior to being used for CCR disposal. The first power production at the CMPP occurred around 1914. Through the years, the impoundment received sluiced bottom ash, fly ash, boiler blow-down, cooling tower blow-down, and storm water runoff from the CMPP. The impoundment ceased receipt of CCR in 2015, in accordance with the Federal CCR Final Rule (40 CFR §257.53), allowing it to be classified as an inactive surface impoundment.

The inactive surface impoundment area is situated at the northern portion of the CMPP facility, within the property boundary, as shown on Figures 1-1 and 1-2. The impoundment covers about seven (7) acres and was not constructed with an engineered liner. The impoundment is operated under MDNR Permit No. 0004979. The base elevation of the inactive surface impoundment is around 745 feet above mean sea level (amsl) based on test pits dug in the fall of 2016 (Burns & McDonnell, 2016).

The CWLD began removal of CCR material in late 2017, with the intent of working towards closure by removal of the inactive CCR surface impoundment, as defined in the Final Rule. A final inspection of the impoundment on May 31st, 2019 determined that all CCR material had been removed from the facility.

1.3 Overview

This Report is organized in sections as summarized below:

- **Section 1.0 Introduction**
- **Section 2.0 Monitoring Well Installation Activities** - Section 2.0 describes monitoring well installation activities and a description of the More's Lake monitoring well network.
- **Section 3.0 Groundwater Monitoring** – Section 3.0 presents a narrative of the background and detection monitoring activities that have been performed during the reporting period.
- **Section 4.0 Assessment Monitoring Results** – Section 4.0 discusses the groundwater monitoring results under Assessment Monitoring program.
- **Section 5.0 Certifications and Notifications to the Operating Record** – Section 5.0 presents certifications and notifications that were prepared during the reporting period and placed in the operating record.
- **Section 6.0 – Key Activities for the Upcoming Year** – Section 6.0 presents an account of anticipated activities for August 2020 through July 2021.
- **Section 7.0 References** - Section 7.0 includes a full bibliography for references made within this report.

2.0 MONITORING WELL INSTALLATION

2.1 Scope of Well Installation Activities

To meet the requirements presented in the Final Rule, eight new monitoring wells (MW-1 through MW-8) were installed around More's Lake in May 2017 to supplement the existing monitoring well network (PZ-1 through PZ-6). These new wells were installed to provide both upgradient and down-gradient monitoring locations. The established monitoring well network was certified in April 15, 2019 to fulfill the Final Rule requirements presented in 40 CFR §257.91(f). Figure 2-1 presents the More's Lake monitoring well network relative to the inactive CCR surface impoundment.

No monitoring wells were installed in 2019.

3.0 GROUNDWATER MONITORING

Groundwater samples were collected using low-flow purging and sampling techniques following the procedures presented in the SAP and in accordance with the requirements of the GMP and the Final Rule.

3.1 Description of the Groundwater Monitoring Program

A total of eight background monitoring events were completed at More's Lake beginning in December 2017 and ending in March 2019 to provide a minimum of eight independent groundwater samples for each of the parameters listed in 40 CFR §257 Appendix III and IV and the additional MDNR water quality parameters listed in the MDNR CCR Storage and Disposal Sites in Missouri White Paper (MDNR, 2016).

As reported in the initial Annual Groundwater Monitoring and Corrective Action Report (Burns & McDonnell, 2019c). The background groundwater monitoring data (December 2017 through March 2019) was evaluated for statistically significant increases (SSIs) over background levels for the constituents listed in Appendix III of 40 CFR § 257, per 40 CFR § 257.93(h) and § 257.94(a) with SSIs over background identified in one or more down-gradient monitoring wells. Statistical analysis was also performed on additional MDNR water quality parameters and identified SSIs over background in one or more down-gradient monitoring wells. Due to SSIs above background levels observed in Final Rule Appendix III detection monitoring parameters, per 40 CFR §257.94(e), CWLD established an assessment monitoring program on July 29, 2019. Notification of the establishment of an Assessment Monitoring Program (Burns & McDonnell, 2019d) was prepared and placed in the facility operating record and on the publicly available website in accordance with 40 CFR § 257.106(h), § 257.105(h), and § 257.107(h), respectively. Results of the assessment monitoring program implementation are provided in this report, in accordance with 40 CFR § 257.90(e).

3.2 Groundwater Sampling Activities

A summary of the assessment groundwater monitoring events that occurred during the reporting period is as follows:

- August 2019 – Initial Assessment Monitoring performed on August 26-27, 2019.
- December 2019 – Assessment Monitoring performed on December 3-4, 2019.

During each monitoring event, the depth to groundwater was gauged prior to sampling using a decontaminated water level probe. The measured depth to groundwater and calculated water level

elevations for each event are presented in Tables 3-1 and 3-2. Potentiometric surface maps were then generated based on calculated groundwater elevations and are presented as Figures 3-1 and 3-2. As shown on Figures 3-1 and 3-2, the primary groundwater gradients observed during the reporting period predominantly indicate flow towards the north-northwest.

Following water level gauging, monitoring wells were purged with dedicated bladder pumps using low-flow procedures until stabilization criteria were met and the turbidity was below 5 Nephelometric Turbidity Units (NTUs). With the exception of turbidity, no issues were encountered during the assessment monitoring events at More's Lake. Turbidity stabilized above 5 NTUs at Monitoring Wells MW-6 (14.2 NTU), MW-7 (14.8 NTU), and MW-8 (11.8 NTU) during the August 2019 sampling event and at Monitoring Wells MW-6 (12.15 NTU) and MW-7 (11.1 NTU) during the December 2019 sampling event.

Once groundwater stabilized, the monitoring wells were sampled for the complete list of parameters listed in 40 CFR §257 Appendix III and IV and the additional MDNR water quality parameters (MDNR, 2016) using analytical methods presented in Table 3-3.

Samples were collected in accordance with the SAP included in the GMP and were submitted to Pace Analytical Services, Inc. located in Lenexa, Kansas for analysis. Field sampling forms are included in Appendix A, copies of laboratory analytical reports are included as Appendix B, copies of data validation reports prepared by Burns & McDonnell are provided in Appendix C (all data are considered valid for use in reporting as qualified), and a table summarizing the analytical results collected from each monitoring well is included in Table 3-3.

4.0 ASSESSMENT MONITORING RESULTS

In response to the findings that an SSI above background for an Appendix III constituent had been observed in groundwater monitoring data collected as part of the detection monitoring program implemented at More's Lake, an assessment monitoring program was established in accordance with 40 CFR §257.95 with notification provided to MDNR (Burns & McDonnell, 2019d) on July 29, 2019 and placed in the facility operating record in accordance with 40 CFR §257.94(e)(3).

GWPSs were established in accordance with §257.95(h) for Appendix IV constituents that were detected in one or more monitoring well during an initial assessment groundwater monitoring event performed in August 2019 in accordance with §257.95(b). When establishing GWPSs, established background concentrations were compared to USEPA maximum concentration limits (MCLs) in §257.95(h)(1) and the health-based levels presented for cobalt, lithium, and molybdenum in §257.95(h)(2). Background limits were calculated using prediction interval analysis consistent with § 257.93(f)(3). The prediction interval assessment was performed using historic data from upgradient monitoring wells MW-2 through MW-7 as the background dataset (data from December 2017 through March 2019). The calculated background limits were compared to the levels identified in §257.95(h)(1) [MCLs] and §257.95(h)(2) [health-based levels presented for cobalt, lithium, and molybdenum] and the higher of the two values was selected as the GWPS in accordance with §257.95(h)(3). The notification of establishment of GWPSs for More's Lake was presented in an *Establishment of Groundwater Protection Standards and Initial Assessment Monitoring Event* letter (Burns & McDonnell, 2019e) dated December 3, 2019 and placed in the facility operating record and on the publicly available website. The established GWPSs are summarized in Table 4-1.

Groundwater analytical results from 2017 through 2019 are summarized in Table 3-3 and compares detected constituents to their respective GWPS. None of the detected Appendix IV parameters from the August 2019 and December 2019 assessment monitoring sampling events exceeded their respective GWPS. GWPS exceedances were observed in Appendix III and MDNR Water Quality parameters from August 2019 and December 2019 and included the following:

Appendix III Parameters: total dissolved solids, calcium, and sulfate

MDNR Water Quality Parameters: magnesium, iron, total organic carbon, total hardness, and sodium.

No exceedances of Appendix IV parameters for two consecutive events, together with the removal of all CCR material, qualified the facility for closure by removal as discussed in Section 6.

5.0 CERTIFICATIONS AND NOTIFICATIONS TO THE OPERATING RECORD

The following certifications and notifications regarding the groundwater monitoring activities were made to the operating record and/or were posted to the CWLD's publicly accessible CCR website during the reporting period:

- Certification of the Inactive Surface Impoundment Groundwater Monitoring Network - *Groundwater Monitoring System Certification for City of Columbia Water & Light Department Inactive Surface Impoundment (More's Lake)* (Burns & McDonnell, 2019a)
- Selection of Statistical Method – *Statistical Method for Evaluating Groundwater at City of Columbia Water & Light Department Inactive Surface Impoundment (More's Lake)* (Burns & McDonnell, 2019b)
- Initial Annual Groundwater Monitoring and Corrective Action Report - *Annual Groundwater Monitoring and Corrective Action Report; City of Columbia Water & Light Department Inactive Surface Impoundment (More's Lake)* (Burns & McDonnell, 2019c)
- Notification of Assessment Monitoring Program – *Notification of the Establishment of Assessment Monitoring Program at City of Columbia Water & Light Department Inactive Surface Impoundment (More's Lake)* (Burns & McDonnell, 2019d)
- Establishment of Groundwater Protection Standards and Initial Assessment Monitoring Event – *Re: Establishment of Groundwater Protection Standards and Initial Assessment Monitoring Event* (Burns & McDonnell, 2019e)
- Notification of Closure by Removal - *Re: Notification of Closure by Removal – City of Columbia Water & Light Department, Inactive CCR Surface Impoundment (More's Lake)* (Burns & McDonnell, 2020).

6.0 KEY ACTIVITIES FOR THE UPCOMING YEAR

6.1 Closure By Removal Criteria

The closure of More's Lake by removal of CCR is considered complete by satisfying the criteria in 40 CFR 40 §257.102(c) which states the following:

(c) Closure by removal of CCR. An owner or operator may elect to close a CCR unit by removing and decontaminating all areas affected by releases from the CCR unit. CCR removal and decontamination of the CCR unit are complete when constituent concentrations throughout the CCR unit and any areas affected by releases from the CCR unit have been removed and groundwater monitoring concentrations do not exceed the groundwater protection standard established pursuant to § 257.95(h) for constituents listed in appendix IV to this part.

In 2019, the Final Rule's criteria for conducting the closure by removal of CCR is considered satisfied and complete for More's Lake as summarized below:

6.1.1 CCR Removal

The CWLD began the closure by removal process in the summer of 2017, hauling the CCR material to the Columbia, Missouri Sanitary Landfill for final disposal. The CCR material was substantially removed from the impoundment in late summer of 2018 with the exception of small isolated areas, stockpiles, and submerged portion in the pond sump area (southwest corner of pond). The CWLD continued to remove residual CCR material and underlying soil through spring of 2019 with periodic removal inspections performed by Burns & McDonnell in accordance with the *Closure by Removal Verification Plan* (Burns & McDonnell, 2018b) that was conditionally approved by MDNR Solid Waste Management Program (SWMP) in September 17, 2018.

The CWLD completed final removal of the residual CCR material and the final inspection was made on May 31, 2019 to visually verify all CCR material within the historical impoundment footprint had been removed. A *Notification of Closure by Removal* letter (Burns & McDonnell, 2020) was submitted to the SWMP as required by 40 CFR §257.102(h) on February 6, 2020 and included a certification statement that the removal of CCR was completed at More's Lake, in general accordance with 40 CFR §257.102(c) and the *Closure by Removal Verification Plan*. The notification of completion of closure of More's Lake was placed in the facility operating record and posted on the publicly accessible website to satisfy the §257.105(i)(8), §257.106(i)(8), and §257.107(i)(8), respectively.

6.1.2 Groundwater Quality

Groundwater concentrations from assessment monitoring events in August 2019 and December 2019 did not exceed the GWPS established pursuant to §257.95(h) for constituents listed in Appendix IV. These assessment groundwater monitoring results showing no Appendix IV constituents detected at concentrations above the GWPS were provided in the Notification of Closure by Removal letter.

6.2 Closure of More's Lake

Based on the notification letter that included a certification statement that the removal of CCR was completed at More's Lake and groundwater concentrations did not exceed the GWPS for constituents listed in Appendix IV, More's Lake satisfies the Final Rule's criteria for closure.

Following review of the notification letter, the SWMP determined that the closure activities have been completed in a letter dated April 24, 2020.

6.3 Post-Closure Care Requirements

In accordance with 40 CFR 40 §257.104(a)(2), the closure by CCR removal as provided by §257.102(c) is not subject to the post-closure care criteria under the Final Rule.

Following MDNR-approved notification of completion of closure of More's Lake, no further post-closure care activities will be performed, including no further groundwater monitoring events or subsequent groundwater monitoring reports.

Notes:

Samples were collected when More's Lake was in a Detection Monitoring Program

Samples were collected when More's Lake was in an Assessment Monitoring Program

*C = degree Celsius

GWPS = Groundwater Protection Standard

J = Result as an estimated value

J+ = Result qualified as estimated; biased high

JU = Result qualified as nondetect during data validation

mg/l = milligram per liter

mS/cm - millisiemens per centimeter

mV - millivolts

NA - not available

NTU - Nephelometric Turbidity Unit

pCi/L = picocuries per liter

s.u. - standard unit

U - compound analyzed but not detected above laboratory reporting limit.

Orange Shading indicates the detected parameter exceeds the GWPS (may be equivalent to background if background > MCL or RSL).

Notes:

Samples were collected when More's Lake was in a Detection Monitoring Program

Samples were collected when More's Lake was in an Assessment Monitoring Program

*C = degree Celsius

GWPS = Groundwater Protection Standard

J = Result as an estimated value

J+ = Result qualified as estimated; biased high

JU = Result qualified as nondetect during data validation

mg/l = milligram per liter

mS/cm - millisiemens per centimeter

mV - millivolts

NA - not available

NTU - Nephelometric Turbidity Unit

pCi/L = picocuries per liter

s.u. - standard unit

U - compound analyzed but not detected above laboratory reporting limit.

Orange Shading indicates the detected parameter exceeds the GWPS (may be equivalent to background if background > MCL or RSL).

Notes:

Samples were collected when More's Lake was in a Detection Monitoring Program

Samples were collected when More's Lake was in an Assessment Monitoring Program

*C = degree Celsius

GWPS = Groundwater Protection Standard

J = Result as an estimated value

J+ = Result qualified as estimated; biased high

JU = Result qualified as nondetect during data validation

mg/l = milligram per liter

mS/cm - millisiemens per centimeter

mV - millivolts

NA - not available

NTU - Nephelometric Turbidity Unit

pCi/L = picocuries per liter

s.u. - standard unit

U - compound analyzed but not detected above laboratory reporting limit.

Orange Shading indicates the detected parameter exceeds the GWPS (may be equivalent to background if background > MCL or RSL).

Notes:

Samples were collected when More's Lake was in a Detection Monitoring Program

Samples were collected when More's Lake was in an Assessment Monitoring Program

*C = degree Celsius

- GWPS = Groundwater Protection Standard
- J = Result as an estimated value
- J+ = Result qualified as estimated; biased high
- JU = Result qualified as nondetect during data validation
- mg/l = milligram per liter
- mS/cm - millisiemens per centimeter
- mV - millivolts
- NA - not available
- NTU - Nephelometric Turbidity Unit
- pCi/L = picocuries per liter
- s.u. - standard unit
- U - compound analyzed but not detected above laboratory reporting limit.

Orange Shading indicates the detected parameter exceeds the GWPS (may be equivalent to background if background > MCL or RSL).

Samples were collected when More's Lake was in a Detection Monitoring Program

Samples were collected when More's Lake was in an Assessment Monitoring Program

*C = degree Celsius

GWPS = Groundwater Protection Standard

J = Result as an estimated value

J+ = Result qualified as estimated; biased high

JU = Result qualified as nondetect during data validation

mg/l = milligram per liter

mS/cm - millisiemens per centimeter

mV - millivolts

NA - not available

NTU - Nephelometric Turbidity Unit

pCi/L = picocuries per liter

s.u. - standard unit

U - compound analyzed but not detected above laboratory reporting limit.

Orange Shading indicates the detected parameter exceeds the GWPS (may be equivalent to background if background > MCL or RSL).

Notes:

Samples were collected when More's Lake was in a Detection Monitoring Program

Samples were collected when More's Lake was in an Assessment Monitoring Program

*C = degree Celsius

GWPS = Groundwater Protection Standard

J = Result as an estimated value

J+ = Result qualified as estimated; biased high

JU = Result qualified as nondetect during data validation

mg/l = milligram per liter

mS/cm - millisiemens per centimeter

mV - millivolts

NA - not available

NTU - Nephelometric Turbidity Unit

pCi/L = picocuries per liter

s.u. - standard unit

U - compound analyzed but not detected above laboratory reporting limit.

Orange Shading indicates the detected parameter exceeds the GWPS (may be equivalent to background if background > MCL or RSL).

Notes:

Samples were collected when More's Lake was in a Detection Monitoring Program
 Samples were collected when More's Lake was in an Assessment Monitoring Program

*C = degree Celsius

GWPS = Groundwater Protection Standard

J = Result as an estimated value

J+ = Result qualified as estimated; biased high

JU = Result qualified as nondetect during data validation

mg/l = milligram per liter

mS/cm - millisiemens per centimeter

mV - millivolts

NA - not available

NTU - Nephelometric Turbidity Unit

pCi/L = picocuries per liter

s.u. - standard unit

U - compound analyzed but not detected above laboratory reporting limit.

Orange Shading indicates the detected parameter exceeds the GWPS (may be equivalent to background if background > MCL or RSL).

Notes:

Samples were collected when More's Lake was in a Detection Monitoring Program

Samples were collected when More's Lake was in an Assessment Monitoring Program

*C = degree Celsius

GWPS = Groundwater Protection Standard

J = Result as an estimated value

J+ = Result qualified as estimated; biased high

JU = Result qualified as nondetect during data validation

mg/l = milligram per liter

mS/cm - millisiemens per centimeter

mV - millivolts

NA - not available

NTU - Nephelometric Turbidity Unit

pCi/L = picocuries per liter

s.u. - standard unit

U - compound analyzed but not detected above laboratory reporting limit.

Orange Shading indicates the detected parameter exceeds the GWPS (may be equivalent to background if background > MCL or RSL).

*Background concentrations were determined utilizing interwell prediction limits. Upgradient wells MW-2, MW-3, MW-4, MW-5, MW-6, and MW-7 were used to determine these background concentrations. Wells MW-1, MW-8, and PZ-2 served as the downgradient/compliance data. Data included in these statistics included data ranging from December 2017 through March 2019.

**Combined radium is reported with an uncertainty. However, this uncertainty cannot be incorporated into statistical calculations as it varies per result and is not a standard value. Therefore, to maintain consistency in reporting these results, the reported laboratory concentration was used for the statistical analyses. Certainty values can be found in the analytical data reports.

Notes:

1. Unless otherwise noted, all GWPS concentrations are based on USEPA's Maximum Contaminant Level (MCL). In some instances, a Secondary MCL may be noted. National Primary Drinking Water Regulation Table (May 2009) can be found: <https://www.epa.gov/ground-water-and-drinking-water/national-primary-drinking-water-regulation-table>. Secondary Drinking Water Standards can be found: <https://www.epa.gov/dwstandardsregulations/secondary-drinking-water-standards-guidance-nuisance-chemicals>.
2. Health-based level - CCR based GWPS for those analytes without an established MCL. See 40 CFR §257.95(h)(2) (July 2018).
3. USEPA Regional Screening Level (RSL) - health-based screening level used as GWPS for those analytes without an MCL (USEPA, April 2019). RSLs can be found: <https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables>.

Abbreviations:

GWPS - Groundwater Protection Standard
 Interwell PL - interwell prediction limits (Sanitas®)
 MCL - Maximum Contaminant Level

mg/L - milligrams per Liter
 pCi/L - picocuries per Liter
 RSL - USEPA Regional Screening Level

SMCL = Secondary Maximum Contaminant Level
 TT - Treatment technique MCL (see link above for MCLs)

APPENDIX B – LABORATORY ANALYTICAL PACKAGES

AUGUST 2019

September 19, 2019

Brian Weis
Burns & McDonnell
9400 Ward Parkway
Kansas City, MO 64114

RE: Project: MORE'S LAKE COLOMBIA,MO
Pace Project No.: 60313018

Dear Brian Weis:

Enclosed are the analytical results for sample(s) received by the laboratory on August 27, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jeffrey Shopper
jeff.shopper@pacelabs.com

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: MORE'S LAKE COLOMBIA,MO

Pace Project No.: 60313018

Method: EPA 200.7

Description: 200.7 Metals, Total

Client: BURNS & MCDONNELL

Date: September 19, 2019

General Information:

4 samples were analyzed for EPA 200.7. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 200.7 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 606161

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60313018002,60313169002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2477519)
 - Calcium
- MSD (Lab ID: 2477520)
 - Calcium

PROJECT NARRATIVE

Project: MORE'S LAKE COLOMBIA,MO

Pace Project No.: 60313018

Method: EPA 6010

Description: 6010 MET ICP

Client: BURNS & MCDONNELL

Date: September 19, 2019

General Information:

4 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 606156

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60313018002,60313169002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2477491)
 - Sodium
- MSD (Lab ID: 2477492)
 - Sodium

QUALIFIERS

Project: MORE'S LAKE COLOMBIA,MO

Peace Project No.: 60313018

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

QUALIFIERS

Project: MORE'S LAKE COLOMBIA,MO

Pace Project No.: 60313018

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
D8	The sample and duplicate results for this parameter are less than 5 times the reporting limit, the RPD may not be statistically valid.
H1	Analysis conducted outside the EPA method holding time.
H6	Analysis initiated outside of the 15 minute EPA required holding time.
J	Analyte detected below the reporting limit, therefore result is an estimate. This qualifier is also used for all TICs.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
P4	Sample field preservation does not meet EPA or method recommendations for this analysis.

RE: Project: MORE'S LAKE COLUMBIA, MO
Pace Project No.: 60313169

Dear Brian Weis:

Enclosed are the analytical results for sample(s) received by the laboratory on August 27, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jeffrey Shopper

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: MORE'S LAKE COLUMBIA, MO

Pace Project No.: 60313169

Method: EPA 200.7

Description: 200.7 Metals, Total

Client: BURNS & MCDONNELL

Date: September 26, 2019

General Information:

7 samples were analyzed for EPA 200.7. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 200.7 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 606161

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60313018002,60313169002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2477519)
 - Calcium
- MSD (Lab ID: 2477520)
 - Calcium

Additional Comments:

PROJECT NARRATIVE

Project: MORE'S LAKE COLUMBIA, MO

Pace Project No.: 60313169

Method: EPA 6010

Description: 6010 MET ICP

Client: BURNS & MCDONNELL

Date: September 26, 2019

General Information:

7 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 606156

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60313018002,60313169002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2477491)
 - Sodium
- MSD (Lab ID: 2477492)
 - Sodium

PROJECT NARRATIVE

Project: MORE'S LAKE COLUMBIA, MO

Pace Project No.: 60313169

Method: EPA 6020

Description: 6020 MET ICPMS

Client: BURNS & MCDONNELL

Date: September 26, 2019

General Information:

7 samples were analyzed for EPA 6020. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: 606109

B: Analyte was detected in the associated method blank.

- BLANK for HBN 606109 [MPRP/529 (Lab ID: 2477382)]
- Aluminum

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

PROJECT NARRATIVE

Project: MORE'S LAKE COLUMBIA, MO

Pace Project No.: 60313169

Method: EPA 7470

Description: 7470 Mercury

Client: BURNS & MCDONNELL

Date: September 26, 2019

General Information:

7 samples were analyzed for EPA 7470. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 7470 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

QC Batch: 361443 Analysis Method: EPA 903.1

QC Batch Method: EPA 903.1 Analysis Description: 903.1 Radium-226

Associated Lab Samples: 60313169001, 60313169002, 60313169003, 60313169004, 60313169005, 60313169006, 60313169007

METHOD BLANK: 1754442 Matrix: Water

Associated Lab Samples: 60313169001, 60313169002, 60313169003, 60313169004, 60313169005, 60313169006, 60313169007

Parameter	Act ± Unc (MDC) Carr Trac	Units	Analyzed	Qualifiers
Radium-226	0.154 ± 0.266 (0.476) C:NA T:83%	pCi/L	09/24/19 14:07	

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: MORE'S LAKE COLUMBIA, MO

Pace Project No.: 60313169

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PAN Pace Analytical National

PASI-K Pace Analytical Services - Kansas City

PASI-PA Pace Analytical Services - Greensburg

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D8 The sample and duplicate results for this parameter are less than 5 times the reporting limit, the RPD may not be statistically valid.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

H6 Analysis initiated outside of the 15 minute EPA required holding time.

J Analyte detected below the reporting limit, therefore result is an estimate. This qualifier is also used for all TICs.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: MORE'S LAKE COLOMBIA, MO
Pace Project No.: 60323115

Dear Brian Weis:

Enclosed are the analytical results for sample(s) received by the laboratory on December 04, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jeffrey Shopper

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: MORE'S LAKE COLOMBIA, MO

Pace Project No.: 60323115

Method: EPA 200.7

Description: 200.7 Metals, Total

Client: BURNS & MCDONNELL

Date: December 30, 2019

General Information:

7 samples were analyzed for EPA 200.7. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 200.7 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 627957

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60322982002,60323115006

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2559537)
 - Calcium
- MSD (Lab ID: 2559538)
 - Calcium

PROJECT NARRATIVE

Project: MORE'S LAKE COLOMBIA, MO

Pace Project No.: 60323115

Method: EPA 6010

Description: 6010 MET ICP

Client: BURNS & MCDONNELL

Date: December 30, 2019

General Information:

7 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: MORE'S LAKE COLOMBIA, MO

Pace Project No.: 60323115

Method: EPA 6020

Description: 6020 MET ICPMS

Client: BURNS & MCDONNELL

Date: December 30, 2019

General Information:

7 samples were analyzed for EPA 6020. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: MORE'S LAKE COLOMBIA, MO

Pace Project No.: 60323115

Method: EPA 7196

Description: 7196 Chromium, Hexavalent

Client: BURNS & MCDONNELL

Date: December 30, 2019

General Information:

7 samples were analyzed for EPA 7196. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: MORE'S LAKE COLOMBIA, MO

Pace Project No.: 60323115

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PAN Pace Analytical National

PASI-K Pace Analytical Services - Kansas City

PASI-PA Pace Analytical Services - Greensburg

ANALYTE QUALIFIERS

D8 The sample and duplicate results for this parameter are less than 5 times the reporting limit, the RPD may not be statistically valid.

H6 Analysis initiated outside of the 15 minute EPA required holding time.

J Analyte detected below the reporting limit, therefore result is an estimate. This qualifier is also used for all TICs.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

MH Matrix spike recovery and/or matrix spike duplicate recovery was above laboratory control limits. Result may be biased high.

R1 RPD value was outside control limits.

REPORT OF LABORATORY ANALYSIS

RE: Project: MORE'S LAKE COLUMBIA, MO
Pace Project No.: 60322982

Dear Brian Weis:

Enclosed are the analytical results for sample(s) received by the laboratory on December 04, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: MORE'S LAKE COLUMBIA, MO

Pace Project No.: 60322982

Method: EPA 200.7

Description: 200.7 Metals, Total

Client: BURNS & MCDONNELL

Date: January 02, 2020

General Information:

4 samples were analyzed for EPA 200.7. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 200.7 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 627957

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60322982002,60323115006

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2559537)
 - Calcium
- MSD (Lab ID: 2559538)
 - Calcium

PROJECT NARRATIVE

Project: MORE'S LAKE COLUMBIA, MO

Pace Project No.: 60322982

Method: EPA 6010

Description: 6010 MET ICP

Client: BURNS & MCDONNELL

Date: January 02, 2020

General Information:

4 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: MORE'S LAKE COLUMBIA, MO

Pace Project No.: 60322982

Method: EPA 6020

Description: 6020 MET ICPMS

Client: BURNS & MCDONNELL

Date: January 02, 2020

General Information:

4 samples were analyzed for EPA 6020. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QUALIFIERS

Project: MORE'S LAKE COLUMBIA, MO

Peace Project No.: 60322982

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PAN Pace Analytical National

PASI-K Pace Analytical Services - Kansas City

PASI-PA Pace Analytical Services - Greensburg

ANALYTE QUALIFIERS

D8 The sample and duplicate results for this parameter are less than 5 times the reporting limit, the RPD may not be statistically valid.

H1 Analysis conducted outside the EPA method holding time.

H6 Analysis initiated outside of the 15 minute EPA required holding time.

J Analyte detected below the reporting limit, therefore result is an estimate. This qualifier is also used for all TICs.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

REPORT OF LABORATORY ANALYSIS

APPENDIX C – DATA VALIDATION REPORTS

AUGUST 2019

Memorandum

Date: October 17, 2019

To: Chris Hoglund

From: Kortney Blaufuss

Re: Quality Assurance/Quality Control (QA/QC) Review of Analytical Data
 Quarterly Groundwater Monitoring Event, August 2019
 at More's Lake – Columbia, Missouri
 Project No. 93647

Groundwater samples were collected for More's Lake in Columbia, Missouri on August 26 and 27 2019. Most samples were analyzed by Pace Analytical (Pace) of Lenexa, KS, and some samples were sent to their sister labs Pace Analytical National of Mount Juliet, Tennessee, and Pace Analytical of Greensburg, PA, unless otherwise noted, for one or more of the following parameters:

Analysis	Method
<u>Appendix III Detection Monitoring</u> Metals: boron and calcium Anions: chloride, fluoride, and sulfate Total Dissolved Solids (TDS) pH	EPA 200.7 EPA 300.0 SM 2540C SW-846 Method 4500-H+B
<u>Appendix IV Assessment Monitoring</u> Metals: antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, lead, lithium, molybdenum, selenium, and thallium Metals: mercury ¹ Radium 226/228 Combined	SW-846 Method 6010 or 6020 SW-846 Method 7470 EPA 903.1/904.0
<u>²MDNR Water Quality Parameters</u> Metals: aluminum, copper, iron, magnesium, manganese, nickel, silver, sodium, zinc Hexavalent and ³ Trivalent Chromium Chemical Oxygen Demand (COD) Total Hardness Total Organic Carbon (TOC) Total Organic Halides (TOX)	SW-846 Method 6010 SW-846 Method 7196 EPA 410.4 EPA 2340B SM 5310C SW-846 Method 9020B

¹Radium 226/228 combined analyzed by Pace of Greensburg, Pennsylvania (calculated result)

²MDNR – Missouri Department of Natural Resources

³Trivalent chromium result based on calculation

The following data sets were reviewed in support of this investigation:

Data Set	Date Collected	Matrix
60313018	08/26/2019	Water
60313169	08/27/2019	Water

The QA/QC results in association with the samples collected were examined for any method-specific requirements. Data qualifiers, when appropriate, were added to the data as recommended in United States Environmental Protection Agency's (USEPA's) *National Functional Guidelines for Inorganic Superfund Methods Data Review* (NFGI, 2017). The QA/QC review results are discussed below. All qualifiers are presented in Table 1.

Memorandum *(continued)*

October 17, 2019

Page 2

1. Chain-of-Custody (COC) – The relinquished and received signatures, times, and dates on the COCs were present.
2. Requested Analyses Completed – All analyses were completed as requested.
3. Holding Times – All samples were analyzed within the recommended method holding times, except for the following:
 - All reported pH results were flagged by the lab for being outside of the 15-minute EPA required holding time. The lab pH measurements were also greater than 24 hours after sample collection times. Since pH was also measured in the field, which had generally comparable results to those in the lab, the reported pH results were qualified as estimated (J) rather than rejected (R).
 - It should be noted the lab flagged the hexavalent chromium result for sample DUP-1 (60313018004) as being outside of the 24-hour hold time; however, this sample was a blind duplicate (no collection time noted to the lab) of sample MW-2. The sample was analyzed within the holding time, and the flag assigned by the lab was disregarded.
4. Sample Preservation – The majority of the samples were received by the laboratories at or below the recommended 4 degrees Celsius ($^{\circ}\text{C}$) \pm 2 $^{\circ}\text{C}$ sample preservation temperature range. Because the samples were not received in a frozen state, the samples were considered viable, and all analyses were completed. No qualifiers were needed due to low temperatures.

In data package 60313018, one of the sample coolers had an elevated temperature of 18.9 degrees Celsius. This cooler contained only the radium samples, which did not have method-specific temperature requirements, and as a result, required no qualification. Additionally, in this data package, the field preservation for TOX analysis did not meet EPA requirements for samples PZ-2, MW-1, MW-2, and DUP-1. As such, the TOX samples were qualified as estimated (J) for any detections and estimated at the reporting limit (UJ) for any nondetects.
5. Laboratory Method Blanks – Method blanks were reviewed to determine the potential for sample cross-contamination due to laboratory handling. No detections of target analytes were noted in the method blanks, except for the following:
 - TOC was detected in the method blank for QC Batch 609458. Associated samples with TOC detections less than 5 times the method blank detection were qualified as nondetect (U). See Table 1.
 - Aluminum was detected in the method blank for QC Batch 2477382. Associated samples with aluminum detections less than 5 times the method blank detection were qualified as nondetect (U). See Table 1.

October 17, 2019

Page 3

- Radium-226 and/or radium-228 had detections in the method blanks in both data packages; however, they were all below the minimum detectable concentration (MDC). All samples reported the radium results as combined radium and had detections which were less than five times the method blank detections, as well as less than their respective MDCs. Normally, results which are less than five-times the method blank detection would be qualified as nondetect (U) to account for potential carryover between the samples in the lab. However, due to the relative error associated with each sample result, and all of the sample results falling below their MDC value, all samples were qualified as estimated (J). This qualification applies to all combined radium results.
6. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) – The LCS/LCSD contains a matrix similar to the sample that has been spiked with known concentrations of target analytes. The LCS/LCSD is prepared and analyzed by the same method as the samples. As a measure of analytical accuracy, the results of the LCS/LCSD are compared against the known analyte concentrations in the spike to determine the percent recovery (REC). The results of these two portions are compared with each other for reproducibility using the relative percent difference (RPD). The purpose of the LCS/LCSD is to determine the performance of the laboratory with respect to analyte recovery, independent of field sample matrix interference. All LCS/LCSD RECs were within their respective QC limits.
7. Matrix Spike/Matrix Spike Duplicates (MS/MSD) – MS/MSDs are typically run for organic and inorganic analyses. A sample is split into three portions (original, MS and MSD), and a known amount of a target analyte is added (spiked) to two portions (MS and MSD) of the sample. The results of these two portions are compared with each other for reproducibility using the RPD. They are also compared against the unspiked portion of the sample for REC of the spike. Note, only project-specific MS/MSD samples were evaluated.
- The MS/MSD performed on sample MW-1 (60313018002) for calcium and sodium did not meet the spike requirements since the amount used to spike the sample was less than one-fourth the amount in the parent sample. Thus, no conclusion could be drawn from these MS/MSD analyses, and no qualifiers were necessary.
 - The MS performed on sample PZ-2 (60313018001) for COD had a low MS REC. COD was detected in the noted sample, and qualified as estimated (J-) to account for potential low bias.
 - The MS performed on sample MW-8 (60313169001) for hexavalent chromium had a low MS REC. Hexavalent chromium was nondetect in the noted sample, and qualified as estimated at the reporting limit (UJ).

All other project-specific MS/MSD RECs and/or RPDs were within QC limits.

8. Field Duplicate Results – Field duplicate results provide information on the ability to reproduce field results and account for error introduced from handling, shipping, storage, preparation, and

October 17, 2019

Page 4

analysis of field samples. There are no specific USEPA criteria for qualifying data from field duplicate results. Depending upon the sample concentration, one of the following criteria based upon NFGI is applicable:

- Is the compound detected in both portions?
- If the sample concentrations are greater than 5 times the reporting limit, then the maximum allowable RPD is 20 percent for water samples.
- If the sample concentrations are less than 5 times the reporting limit, then a sensitivity test is applied. For the sensitivity test, the sample concentrations must agree within \pm the reporting limit for water samples.
- If the radium results are reported above their minimum detectable concentration (MDC), the normalized difference (also called the relative error ratio) between the duplicate pair was calculated. The maximum normalized difference is 1.96 for the radium samples.

Note that if the dilution factors between the original and duplicate samples differ by a factor of five or more, no qualifiers were added based on discrepancies between the two samples.

The following field duplicate pair was collected:

- MW-2 // DUP-1 (60313018003 // 60313018004): All results were adequately replicated.

9. Laboratory Duplicate Results – In instances where a MS/MSD was not applicable, laboratory duplicate analyses were performed. Laboratory duplicates provide information on the ability to reproduce lab results and to account for error introduced from handling, shipping, storage, preparation, and lab analysis. All project specific laboratory duplicate results were within control limits, except for the following:
 - Pace performed laboratory duplicate analyses for TOX on several project samples. Several were flagged with an RPD exceedance. However, since the results were less than five times the reporting limit, a sensitivity test was more appropriate. The results passed the sensitivity test, and no qualifiers were necessary.
10. Detection and Quantitation Limits – Dilutions for chloride and/or sulfate were required for one or more samples. These dilutions were required to bring target analyte concentrations into the linearity range of the instrument calibration and/or to compensate for matrix interference. All reporting limits were adjusted accordingly. No data qualifiers were added based on the dilutions.
11. Calibration Blanks and Calibration Standards/Verifications – One data package (60313018) had one or more samples for the TOC analysis where the continuing calibration was outside of Pace's

Memorandum *(continued)*

October 17, 2019

Page 5

analytical limits. The lab flagged these samples “CH”, to account for potential high bias. As such, these samples were qualified as estimated (J).

12. Conclusion – The data were reviewed for achievement of any method-specified QA/QC criteria. All qualifiers added during this review are presented in Table 1. All data are valid for use, as qualified, in reporting the results of this investigation.

From: Kortney Blaufuss

Re: Quality Assurance/Quality Control (QA/QC) Review of Analytical Data
 Quarterly Groundwater Monitoring Event, December 2019
 at More's Lake – Columbia, Missouri
Project No. 93647

Groundwater samples were collected for More's Lake in Columbia, Missouri on December 3 and 4, 2019. Most samples were analyzed by Pace Analytical (Pace) of Lenexa, Kansas, and some samples were sent to their sister labs Pace Analytical National of Mount Juliet, Tennessee, and Pace Analytical of Greensburg, Pennsylvania, unless otherwise noted, for one or more of the following parameters:

Analysis	Method
<u>Appendix III Detection Monitoring</u> Metals: boron and calcium Anions: chloride, fluoride, and sulfate Total Dissolved Solids (TDS) pH	EPA 200.7 EPA 300.0 SM 2540C SW-846 Method 4500-H+B
<u>Appendix IV Assessment Monitoring</u> Metals: aluminum, antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, lead, lithium, molybdenum, selenium, and thallium Metals: mercury ¹ Radium 226/228 Combined	SW-846 Method 6010 or 6020 SW-846 Method 7470 EPA 903.1/904.0
<u>²MDNR Water Quality Parameters</u> Metals: copper, iron, magnesium, manganese, nickel, silver, sodium, zinc Hexavalent and Trivalent Chromium ³ Chemical Oxygen Demand (COD) Total Hardness Total Organic Carbon (TOC) Total Organic Halides (TOX) ⁴	SW-846 Method 6010 SW-846 Method 7196 EPA 410.4 EPA 2340B SM 5310C SW-846 Method 9020B

¹Radium 226/228 combined analyzed by Pace of Greensburg, Pennsylvania (calculated result)

²MDNR – Missouri Department of Natural Resources

³Trivalent chromium result based on calculation

⁴Total Organic Halides analyzed by Pace Analytical National of Mount Juliet, Tennessee

The following data sets were reviewed in support of this investigation:

Data Set	Date Collected	Matrix
60323115	12/04/2019	Water
60322982_Rev1	12/03/2019	Water

The QA/QC results in association with the samples collected were examined for any method-specific requirements. Data qualifiers, when appropriate, were added to the data as recommended in United States Environmental Protection Agency's (USEPA's) *National Functional Guidelines for Inorganic Superfund*

Memorandum *(continued)*

January 9, 2020
Page 2

Methods Data Review (NFGI, 2017). The QA/QC review results are discussed below. All qualifiers are presented in Table 1.

1. Chain-of-Custody (COC) – The relinquished and received signatures, times, and dates on the COCs were present.
2. Requested Analyses Completed – All analyses were completed as requested.
3. Holding Times – All samples were analyzed within the recommended method holding times, except for the following:
 - All reported pH results were flagged by the lab for being outside of the 15-minute EPA required holding time. The lab pH measurements were also greater than 24 hours after sample collection times. Since pH was also measured in the field, which had generally comparable results to those in the lab, the reported pH results were qualified as estimated (J) rather than rejected (R).
 - It should be noted the lab flagged the hexavalent chromium result for sample DUP-1 (60322982004) as being outside of the 24-hour hold time; however, this sample was a blind duplicate (no collection time noted to the lab) of sample MW-2. The sample was analyzed within the holding time, and the flag assigned by the lab was disregarded.
4. Sample Preservation – The majority of the samples were received by the laboratories at or below the recommended 4 degrees Celsius ($^{\circ}\text{C}$) \pm 2 $^{\circ}\text{C}$ sample preservation temperature range. Because the samples were not received in a frozen state, the samples were considered viable, and all analyses were completed. No qualifiers were needed due to low temperatures.

In each data package, one of the three sample coolers had elevated temperatures of 14.0 $^{\circ}\text{C}$ and 13.2 $^{\circ}\text{C}$. These coolers contained only the radium samples, which did not have method-specific temperature requirements, and as a result, required no qualification.
5. Laboratory Method Blanks – Method blanks were reviewed to determine the potential for sample cross-contamination due to laboratory handling. No detections of target analytes were noted in the method blanks, except for the following:
 - Radium-226 and/or radium-228 had detections in the method blanks in both data packages. Historical data shows radium (226 and/or 228) has been detected above the reporting limit in more than one sampling event, and there is also a level of uncertainty in radium results that is not typically addressed, or relevant information provided for this scope of work. Rather than qualifying samples nondetect (U) based on these method blank detections, as these data will be used for statistical analysis, the samples were qualified as follows:

January 9, 2020

Page 3

- The majority of the samples had corresponding radium-226 and/or 228 detections less than five times their associated blank value. However, because both radium 226 and 228 were used to report the combined radium, along with their associated uncertainty ranges, all combined radium results were qualified as estimated (J) based on professional judgement.
6. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) – The LCS/LCSD contains a matrix similar to the sample that has been spiked with known concentrations of target analytes. The LCS/LCSD is prepared and analyzed by the same method as the samples. As a measure of analytical accuracy, the results of the LCS/LCSD are compared against the known analyte concentrations in the spike to determine the percent recovery (REC). The results of these two portions are compared with each other for reproducibility using the relative percent difference (RPD). The purpose of the LCS/LCSD is to determine the performance of the laboratory with respect to analyte recovery, independent of field sample matrix interference. All LCS/LCSD RECs were within their respective QC limits.
7. Matrix Spike/Matrix Spike Duplicates (MS/MSD) – MS/MSDs are typically run for organic and inorganic analyses. A sample is split into three portions (original, MS and MSD), and a known amount of a target analyte is added (spiked) to two portions (MS and MSD) of the sample. The results of these two portions are compared with each other for reproducibility using the RPD. They are also compared against the unspiked portion of the sample for REC of the spike. Note, only project-specific MS/MSD samples were evaluated.
- The MS/MSD performed on sample MW-1 (60322982002) for calcium did not meet the spike requirements since the amount used to spike the sample was less than one-fourth the amount in the parent sample. Thus, no conclusion could be drawn from these MS/MSD analyses, and no qualifiers were necessary.
 - The MS/MSD performed on sample MW-8 (60323115001) for fluoride had a low MSD REC and an elevated RPD. Fluoride was detected in the noted sample, and qualified as estimated (J).

All other project-specific MS/MSD RECs and/or RPDs were within QC limits.

8. Laboratory Duplicate Results – In instances where a MS/MSD was not applicable, laboratory duplicate analyses were performed. Laboratory duplicates provide information on the ability to reproduce lab results and to account for error introduced from handling, shipping, storage, preparation, and lab analysis. All project specific laboratory duplicate results were within control limits, except for the following:
- Pace performed laboratory duplicate analyses for TOX on several project samples. Several were flagged with an RPD exceedance. However, since the results were less than five times the reporting limit, a sensitivity test was more appropriate. The results passed the sensitivity test, and no qualifiers were necessary.

January 9, 2020
Page 4

9. Field Duplicate Results – Field duplicate results provide information on the ability to reproduce field results and account for error introduced from handling, shipping, storage, preparation, and analysis of field samples. There are no specific USEPA criteria for qualifying data from field duplicate results. Depending upon the sample concentration, one of the following criteria based upon NFGI is applicable:
- Is the compound detected in both portions?
 - If the sample concentrations are greater than 5 times the reporting limit, then the maximum allowable RPD is 20 percent for water samples.
 - If the sample concentrations are less than 5 times the reporting limit, then a sensitivity test is applied. For the sensitivity test, the sample concentrations must agree within \pm the reporting limit for water samples.
 - If the radium results are reported above their minimum detectable concentration (MDC), the normalized difference (also called the relative error ratio) between the duplicate pair was calculated. The maximum normalized difference is 1.96 for the radium samples.

Note that if the dilution factors between the original and duplicate samples differ by a factor of five or more, no qualifiers were added based on discrepancies between the two samples.

The following field duplicate pair was collected:

- MW-2 // DUP-1 (60322982003 // 60322982004): The results for iron results exhibited an elevated RPD. As such, this analyte was qualified as estimated (J) to account for this field duplicate discrepancy. Additionally, the aluminum results were less than five times their reporting limit, and a sensitivity test was applied. The results failed the sensitivity test and were qualified as estimated (J) to account for the field duplicate discrepancy.
10. Detection and Quantitation Limits – Dilutions for chloride and/or sulfate were required for one or more samples. These dilutions were required to bring target analyte concentrations into the linearity range of the instrument calibration and/or to compensate for matrix interference. All reporting limits were adjusted accordingly. No data qualifiers were added based on the dilutions.
11. Conclusion – The data were reviewed for achievement of any method-specified QA/QC criteria. All qualifiers added during this review are presented in Table 1. All data are valid for use, as qualified, in reporting the results of this investigation.

All Samples	Varies	Combined Radium 226/228	J	Method blank detections (see text for details)
SDG 60322982_Rev1				
MW-2 DUP-1	60322982003 60322982004	Iron Aluminum	J	Field Duplicate Discrepancy
SDG 60323115				
MW-8	60323115001	Fluoride	J	MSD REC < QC Limits; RPD > QC Limit

Notes:

J = qualified as estimated
MSD = matrix spike duplicate
QC = quality control

REC = percent recovery
RPD = relative percent difference
SDG = sample delivery group

CREATE AMAZING.
