

Commercial Development Plan Review Help Document

Commercial Development Plan Review

The Purpose of Plan Review

Plans are reviewed to ensure compliance with the City of Columbia's adopted codes, ordinances, and policies for commercial, subdivision, and multifamily residential development. The review focuses primarily on public safety issues, compliance with final development plans and plats, the development's effect on existing and proposed public infrastructure, impact on neighboring properties, and ensuring sound engineering principles. In particular, the International Building Code states that the purpose of code enforcement is to protect life, health, safety, welfare, and property as well as fire fighters and emergencies responders during emergencies. Although the staff reviews plans for these issues, the ultimate responsibility for the construction documents rests with the design professionals. Construction plan review minimizes field changes because it necessitates interpretation of standards prior to the construction occurring, thereby saving time and expense for both the City and developer.

The review process will also carry forward any stipulations set forth by City Council during the planning process. Approvals necessary from outside agencies such as the U.S. Army Corps of Engineers, Missouri Department of Natural Resources, or Missouri Department of Transportation may also be required at this step prior to the issuance of a permit. Coordination with other agencies is the responsibility of the developer and/or his or her agents.

Construction plan review must be completed prior to issuance of a permit and the start of construction.

For an overview of the plan review process, go to <https://www.como.gov/community-development/building-site-development/>. Please refer to "Related Documents" below the heading "Citizen Self Service Portal".

Timeframes for Plan Review

For new construction, the City has established a goal of completing the initial review within ten (10) working days and subsequent reviews within five (5) working days. "Day 1" begins when the plans have been accepted for review through the Initial Screening Process (ISP). Our goal is to process plans through ISP the next working day after plans have been submitted. When workload is heavy and plans are submitted late in the day, it may occasionally take two working days to move plans through ISP. The staff will make every effort to accelerate the review of revisions prior to starting new projects, especially

Our vision: Columbia is the best place for everyone to live, work, learn and play.

when the number of plan review comments is low.

- All documents and drawings must be submitted at one time and from one source to begin the process of being accepted for review.

Plan Review Responsibilities

All submittals must be submitted online through the CSS portal. Depending on the type of project and the permit type applied for, submittals will be automatically pushed out to one or more of the following agencies to review your project.

Addressing/GIS

Responsible for the review of plans to verify and/or assign addresses for all projects.

Community Development Department

Planning & Development Division

Reviews plans for compliance with development occurring in “planned” and “overlay” zoning districts as well as those that may have special development conditions imposed by Council-approved development agreements. If your project is located in one of these areas the Planning Divisions requires construction plans to be submitted for review.

Building and Site Development Division

Building Safety Division

Responsible for the review of building and site plans for compliance with the currently adopted and amended ICC family of model codes. Building Safety requires construction plans be submitted for review for all new building/structure construction and remodels, as well as fire systems. Electronic signatures/seals in conformance with state statutes will be acceptable.

Site Development Division

Responsible for the review of onsite and offsite improvements that relate to the following categories:

- Land disturbance, Erosion and sediment control
- Site plans, Grading plans
- Infrastructure plans
 - Storm sewer system
 - Street improvements, traffic
 - Sidewalks and drive approaches
- Stormwater management - water quality and detention
- Floodplain development
- Stream buffers
- *Temporary traffic control plan
- *Retaining walls

* Deferred submittal is allowed. May be submitted separately from Site Development plans.

Site Development requires construction plans be submitted for review for all projects that involve site work. Electronic signatures/seals in conformance with state statutes will be acceptable.

Fire Department

Responsible for the review of the plans for compliance with the adopted fire codes and referenced standards, specifically in the following areas:

- International Fire Code
- All Referenced Standards
- Fire Sprinkler Systems
- Fire Alarm Systems
- Fire Suppression Systems
- Coiling Fire Door/Shutter Assemblies
- Above Ground or Underground Storage Tanks
- Fire lane placement
- Fire flow requirements
- Fire hydrant placement
- Hazardous materials use or storage

The Fire Department requires construction documents be submitted for review of new commercial construction and remodel projects. **Plans must be submitted, reviewed, and approved before a permit may be obtained and before installation.**

Health Department

Responsible for the review of the plans for compliance with standards relating to the following:

- Facilities involving food and/or beverage of any type including restaurants, child care facilities, convenience stores and bars
- Design, operation and maintenance of public swimming pools and spas
- Tattoo parlors
- Lodging establishments

The Health Department requires construction plans be submitted for all projects which involve work of this nature.

Utilities

Columbia Water & Light

Responsible for the review of plans involving the installation, upgrade, or relocation of city-owned electrical and water utilities. The Water and Light Department requires

construction plans that include the following items:

- Panel schedules
- Watt load calculations
- Electric riser diagram
- Locations of equipment
- Plumbing riser with meter and backflow location
- Plumbing plan view with meter and backflow location
- Total supply fixture units (demand)
- Sewer riser and plan view
- Architect floor plan
- Fire sprinkler system plans and calculations

An electronic (AutoCAD) copy of the site plan that includes locations of property lines, easements, buildings, pavement, and utilities both existing and proposed must be submitted for all projects.

Sewer

Responsible for the review of plans involving a new sewer main.

Waste Water Treatment

Responsible for the review of plans involving the grease interceptors or sand-oil separators.

Solid Waste

Responsible for the review of plans involving new dumpster pad location or enclosures.

Coordination with Utilities and Outside Agencies

It is the responsibility of the developer to determine any utility or outside agency requirements relative to their projects. A list of utility companies, with addresses and phone numbers, is attached on Appendix B for reference. The following are some of the governmental agencies that may require contact and/or approval prior to proceeding with phases of work or obtaining permits.

- Missouri Department of Transportation (MoDOT) – if the project proposes construction in or immediately adjacent to state right of way, a permit from MoDOT may be necessary → 1-888-ASK-MODOT
- Missouri Department of Natural Resources (MDNR) – if the project proposes land disturbance in excess of one acre a permit is required from MDNR → (660) 385-8000
- U.S. Army Corps of Engineers – if the project disturbs Waters of the U.S. or Wetlands, a permit may be necessary → (816) 389-3990

- Federal Emergency Management Agency (FEMA) – if the project alters the federal floodplain, a Letter of Map Revision (LOMR) may be necessary → (816) 283-7061
- Missouri Division of Fire Safety (Elevator Safety Unit) – if the project includes an elevator the State Fire Marshall must be contacted to ensure that all proper permits are obtained and inspections completed → (573) 751-2263
- Missouri Department of Health and Senior Services for lodging requirements and licensed child care facilities

Plan Review Steps

Step 1 – Optional Pre-Application Meeting

A pre-application meeting is an informal discussion between city plan reviewers and building professionals, and is highly recommended prior to submitting construction plans for a permit. The meeting is particularly appropriate for developers, design professionals, and contractors who have minimal experience with developing in Columbia.

A pre-application meeting allows the applicant to explain issues that shaped the design of the project. At the same time, the staff can identify issues that may be addressed prior to plans being submitted. An explanation of the plan review process can be offered and the applicant can ask questions regarding Columbia's procedures.

These reviews are preliminary and the decisions may be subject to change as more information becomes available. Primary responsibility for compliance with the codes and ordinances remains the responsibility of the design professional and the contractor.

The level of detailed assistance from city staff will depend on the completeness of the information provided and the time to review the information. Final determination on any issue will be made at the time full plans are submitted.

It is important to check for conditions or stipulations attached to rezoning cases, special use permits, planned district plans, plats, or any other type of previously approved plans for the site. It is also important to note that the City does not coordinate services from utility companies outside of those which the City owns and operates (water, electric, and sanitary sewer). Contact utility companies early in the process to ensure the issuance of permits is not delayed.

A pre-application meeting can be scheduled during the City's regularly scheduled Development Review Committee (DRC) meeting. The DRC is comprised of representatives of each of the agencies participating in the plan review process and meets on a regular basis to review development related issues concerning submitted design plans. To schedule a meeting with the DRC contact the Building and Site Development Division at (573) 874-7474.

Step 2 – Initial Screening Process (ISP) for building permits

Applications for building permits are received by the Building and Site Development Division of the Community Development Department via the online CSS portal. For additional information, follow the link: <https://www.como.gov/community-development/building-site-development/building-permit-applications/>

Prior to distribution of the plans for review by City personnel, the plans enter the ISP process. This process is an initial “quick check” to determine if the plans and information submitted are sufficiently complete for a review to be performed. If the plans are deficient, the applicant will be notified within two working days with a list of deficiencies noted. The goal of the ISP is to benefit both the developer and design professionals by reducing review time. If information necessary for plan review is omitted or insufficient, a response from the City is generated within two days instead of waiting the full review period to find out a review could not be completed. Plans are not considered to be under review until after they have been accepted through ISP. The applicant will need to login to CSS to see if the plans have been accepted for review or if resubmittal is required. Refer to the **Initial Screening Process (ISP) for building permits** document outlining typical submittal requirements.

Step 3 – Staff Plan Review

After acceptance through ISP, plans are distributed to each division/department responsible for review. An individual from each reviewing entity is assigned to review the project and an overall review coordinator is designated to consolidate all information and make the formal response back to the applicant.

- **Permit Phasing – Partial Permits**

A decision to phase permits may be made prior to the initial plan submittal or after the plans have been submitted. Permission to phase the project must be requested in writing and approved by the Director of Community Development. Once approved the requirements for each phase must be satisfied prior to proceeding to the next phase.

Permits include:

- “Grading Only” Land Disturbance – clearing and earthmoving on private property (no work in the public right of way)
- Land Disturbance – all site work up to the footing and foundation including public improvements, stormwater detention, and water quality improvements, if applicable
- Demolition
- Interior Demolition
- Footings and Foundation – all site work, including footings, foundation, and base floor slab
- Full Building Permit – all work for the project

- **Public Infrastructure Improvements & Stormwater Management Review**

Public improvements are often required with projects that will develop areas where the City's infrastructure does not already exist or where improvements are necessary to accommodate the new development. Public infrastructure improvements should be designed to meet the requirements of the current edition of the City's *Street and Storm Sewer Specifications and Standards* and the City's Code of Ordinances.

Stormwater Management (detention and water quality) improvements are also required. More information about these requirements can be found in the city's *Stormwater Management and Water Quality Manual* and Chapter 12A of the city's Code of Ordinances.

In addition to the construction plans and required calculations, items required and/or reviewed include:

- Plan review and inspection fee
- Approved Right-of-Way Permit and Temporary Traffic Control plan
- Executed and notarized Easements and BMP Maintenance Covenants

Examples of Public Infrastructure Improvements include:

- New public street
- Public street widening
- Turn lane/median modification
- New public storm or sanitary sewer
- Improvement of existing public storm or sanitary sewer
- Improvement of existing water or electric utilities

Step 4 – Plan Revisions

All staff comments from the City will be consolidated into one markup summary uploaded to CSS along with markups on the plans. A notification email may or may not be sent when markups are available. Individual staff members may email drafts of their review comments in advance of the consolidated markup summary to assist the designers. It is the design professional's responsibility to ensure that no part of the final letter conflicts with the draft review comments.

When all comments are addressed, plans and other documents shall be resubmitted to the Building and Site Development Division using the following guidelines:

- All City review comments shall be addressed by the applicant and submitted together. Partial submittals will not be accepted.
- A cover letter explaining how each comment was addressed shall accompany the resubmittal.
- The cover letter shall use the same numbering system as the consolidated city comment letter.

- If phasing of the permit is desired and approved, responses to comments for each phase may be submitted together with a corresponding cover letter. For example, if plans were submitted for a full permit and after the first review the applicant chose to concentrate on the footing and foundation permit, all comments relative to that phase may be submitted without addressing all comments for the full permit.

City staff recommends that the applicant contact the review coordinator prior to re-submittal of revisions to discuss any questions the applicant has regarding the staff's comments in order to prevent any misunderstandings which may result in additional revisions or delays. Staff is available for meetings if so desired. Meetings can be scheduled by contacting the assigned review coordinator for the project.

Step 5 – Plan Approval

When the plans meet the requirements of all City agencies, the plans will be approved and the applicant will be notified. Pre-construction conferences may be requested if desired. Call (573) 874-7474 to schedule.

Step 6 – Permitting

After approval, the applicant along with other contacts listed in CSS, can view permit fees, have a list of required inspections, and pay for the permit through the CSS portal. After the general contractor is added to the permit case and fees have been received, the building permit will be issued. At that time, the permit is valid and can be printed and posted on site.

Construction may not begin until after the permit has been issued.

Items which frequently delay permit issuance include:

- Failure of General Contractor to hold a valid business license to perform work in the City
- Failure to comply with the fire code requirements outlined in Chapter 14 of the adopted fire code as it relates to construction sites (i.e. access, water supplies, etc.)
- Approval from outside agencies
- Approval of plans for improvements to City owned utilities
- Approval of construction plans for public improvements or stormwater management
- Dedication of right of way and/or easements for proposed public improvements or privately maintained stormwater best management practices (BMPs)
- Legal agreements for maintenance of amenities in the right of way or Stormwater Management/BMP Covenants for privately maintained stormwater BMPs
- Approval of variances
- Plan review/inspection fees not received

Step 7 – Pre-Construction Meeting

A Pre-Construction meeting is optional. Once the permit has been approved, customers should contact the Building and Site Development Division at (573) 874-7474 to schedule a pre-construction meeting.

Pre-construction meetings are designed to offer a forum where the contractor(s) and City staff can discuss the scope of the project and various procedures the contractor must adhere to. The overall intent of the meetings is to help the contractor avoid construction delays or a delay in getting an occupancy permit. Generally, the job superintendent and the Erosion control subcontractor will attend the meeting, along with City personnel such as the Building Regulations Supervisor, a Fire Department representative, and a Site Development inspector. Contractors may also invite any additional parties to this meeting.

Staff will provide information on the overall scope of the project and discuss any special permit conditions being attached to the permit. Special conditions most often discussed relate to fire alarm drawings, fire sprinkler drawings, landscape requirements, special inspection requirements, etc. The requirements for maintaining and inspecting erosion and sediment control features are also discussed. Applicable City forms will be distributed at the meeting, as well as contact information for various individuals.
