# Put native plants to work

Red buckeye is one of many native trees to plant instead of non-native, invasive bush honeysuckle or Callery pears.

Natives provide nectar and pollen for native bees of all shapes and sizes.

The foliage of many native plants provides food for insects, which are in turn critical food for songbirds.

Make your home landscaping come alive with natives.

Natives in rain gardens slow and absorb stormwater, protecting streams.

Native pastures provide healthy, drought-tolerant forage for livestock, and strips of prairie plants next to row crops, above, trap sediment and fertilizers, and provide pollinator habitat on farms.

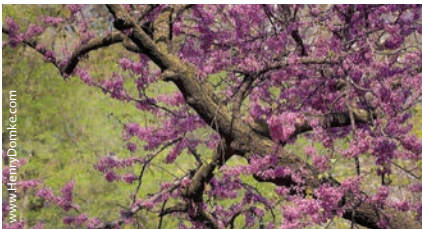

Pawpaws, black walnuts, blackberries, and other native plants provide food for people.

## Photo credits:

Front cover photo credits, clockwise from top left: Mervin Wallace, Glenn Chambers©, MDC, Noppadol Paothong, Amy Humphrey Hayes, Ed Spevak, Mervin Wallace, Steve Clubine, Scott Woodbury, Forrest Keeling Nursery. Center photo by Noppadol Paothong.

## Plant native alternatives to invasive species

Native alternatives to highly invasive bush honeysuckle and Bradford/Callery pear include those below left, as well as possumhaw (*Ilex decidua*), native viburnums (*Viburnum* spp.), and roughleaf dogwood (*Cornus drummondii*). Not only do these natives provide privacy, they also increase the biodiversity and beauty of your property.

Native alternatives top from left: flowering dogwood (*Cornus florida*) and ninebark (*Physocarpus opulifolius*); middle from left: redbud (*Cercis canadensis*), golden currant (*Ribes aureum*), and vernal witchhazel (*Hamamelis vernalis*); and bottom from left: Mexican plum (*Prunus mexicana*) and beauty berry (*Callicarpa americana*).

PLANT  
THESE

NOT  
THESE

## INVASIVE SPECIES

Highly invasive bush honeysuckle (*Lonicera maackii*), right, and Callery/Bradford pear (*Pyrus calleryana*), below.

Find more information on invasive plant identification and control at [Molnatives.org](http://Molnatives.org), a resource of the Missouri Invasive Plant Council (MoIPC).

# Provide for pollinators with native plants

## Grow Native's Monarch Café food for Monarchs

Monarch Café tags feature the eight native species of milkweed most beneficial to monarch butterfly caterpillars (larvae)—as recommended by Monarch Watch.

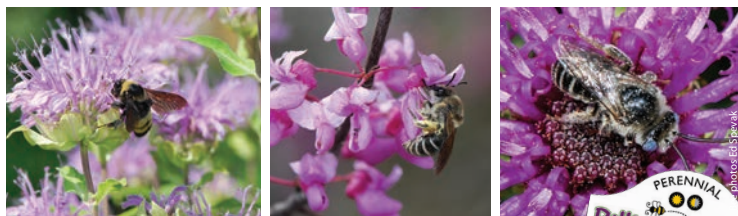

Nectar of milkweeds attracts many butterflies, like the tiger swallowtail above, and other insects. Adult monarch butterflies lay their eggs on milkweeds, and when the caterpillars hatch, they eat the leaves and other plant parts.

Look for Grow Native! tags when you shop for plants.

## Grow Native's Pollinator Buffet Supporting the Food Web

Pollinator Buffet tags feature 11 of the many flowering plants native to the lower Midwest that provide nectar and/or pollen for pollinating insects. The landscape-worthy natives featured in the Pollinator Buffet series are among many flowering plants that will help you provide nectar and pollen from early spring through late fall for pollinators.

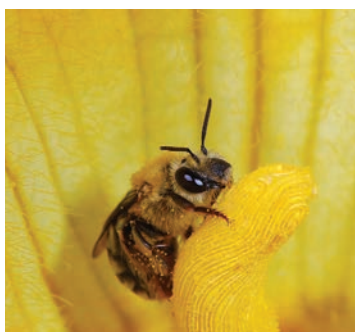

Many insects, including native bees, pollinate the vast majority of flowering plants and one-third of our food crops.

## Using native plants to lure native bees to your yard can facilitate pollination of fruits and vegetables.

Many native bees—of a variety of sizes and shapes—are the only insects that pollinate certain fruits and vegetables. For example, squash bees are vital for squash flower pollination, and bumble bees pollinate tomato flowers. Sustaining and increasing native bee populations with native plants helps ensure there are plenty of pollinators for the fruits and vegetables you grow! Find a two-page Grow Native! fact sheet on this topic, and many other fact sheets, at [grownative.org](http://grownative.org).

Clockwise from top left are a two-spotted bumble bee on tomato flowers, a squash bee in a pumpkin blossom, a black and yellow bumble bee on a wild bergamot flowerhead, a brown belted bumble bee on a wild blue indigo blossom, a small carpenter bee in a strawberry blossom, and a southeastern blueberry bee on blueberry flowers.

# Choose native plants to support nature's food web & help songbirds thrive

Marcy Terpstra

Linda Williams

Marcy Terpstra

Chris Kirchner

Beloved birds—like cardinals, chickadees, orioles, bluebirds, and so many more—**must feed their babies insects and other invertebrates**. To raise one nest of chickadee babies, parents must forage up to 9,000 caterpillars to feed them (Brewer 1961).\*

What nourishes caterpillars? Native plants! Beneficial insects (and their caterpillar larvae) are dependent on native plants as their food sources—for example, more than 500 different kinds of caterpillars feed on oak trees—and these plants flourish despite the munching.

\*Brewer, R. 1961. Comparative notes on the life history of the Carolina Chickadee. Wilson Bulletin 73:348-373.

In addition to needing native host plants for insect food for their babies, adult songbirds also need **protein-rich and fat-rich fruits and seeds**. Shrubs like **native viburnums, deciduous holly, and serviceberry** provide fruits that songbirds relish. Prairie plants like **coreopsis** and **native grasses** provide seeds to help sustain goldfinches and sparrows.

Planting a variety of native grasses, wildflowers, vines, shrubs, and trees provides songbirds **diverse habitat structure they need to nest and to escape predators and severe weather**.

## PERENNIAL PLANTS

No. of species of butterfly & moth caterpillars supported

Goldenrod (genus <i>Solidago/Oligoneuron</i> )	115
Aster (genus <i>Symphyotrichum</i> [Aster])	112
Sunflower (genus <i>Helianthus</i> )	73
Joe Pye, Boneset (genus <i>Eupatorium</i> )*	42
Morning Glory (genus <i>Ipomoea</i> )	39
Sedge (genus <i>Carex</i> )	36
Honeysuckle (native species of genus <i>Lonicera</i> )	36
Violet (genus <i>Viola</i> )	29
Geranium (genus <i>Geranium</i> )	23
Iris (genus <i>Iris</i> )	17
Evening Primrose (genus <i>Oenothera</i> )	16
Milkweed (genus <i>Asclepias</i> )	12
Verbena (genus <i>Verbena</i> )	11
Beardtongue (genus <i>Penstemon</i> )	8
Phlox (genus <i>Phlox</i> )	8
Bee Balm (genus <i>Monarda</i> )	7
Little Bluestem (genus <i>Schizachyrium</i> )	6
Cardinal Flower (genus <i>Lobelia</i> )	4

## WOODY PLANTS

No. of species of butterfly & moth caterpillars supported

Oak (genus <i>Quercus</i> )	557
Black cherry (genus <i>Prunus</i> )	456
Willow (genus <i>Salix</i> )	455
Birch (genus <i>Betula</i> )	413
Poplar (genus <i>Populus</i> )	368
Crabapple (genus <i>Malus</i> )	311
Blueberry (genus <i>Vaccinium</i> )	288
Maple (genus <i>Acer</i> )	285
Pine (genus <i>Pinus</i> )	203
Hickory (genus <i>Carya</i> )	200
Hawthorn (genus <i>Crataegus</i> )	159
Alder (genus <i>Alnus</i> )	156
Basswood (genus <i>Tilia</i> )	150
Rose (genus <i>Rosa</i> )	139
Filbert (genus <i>Corylus</i> )	131
Walnut (genus <i>Juglans</i> )	130
Beech (genus <i>Fagus</i> )	126
Chestnut (genus <i>Castanea</i> )	125

Chart data from Tallamy et al are national in scope. \*Joe Pye is now in the genus *Eutrochium*

Mervin Wallace

Linda Williams

**REMEMBER:**  
pesticides—  
including those  
sprayed on plants—are  
harmful to insects and  
the baby birds that  
eat insects.

**Native plants, shrubs, vines, and trees help songbirds thrive—and beautify your landscape!**

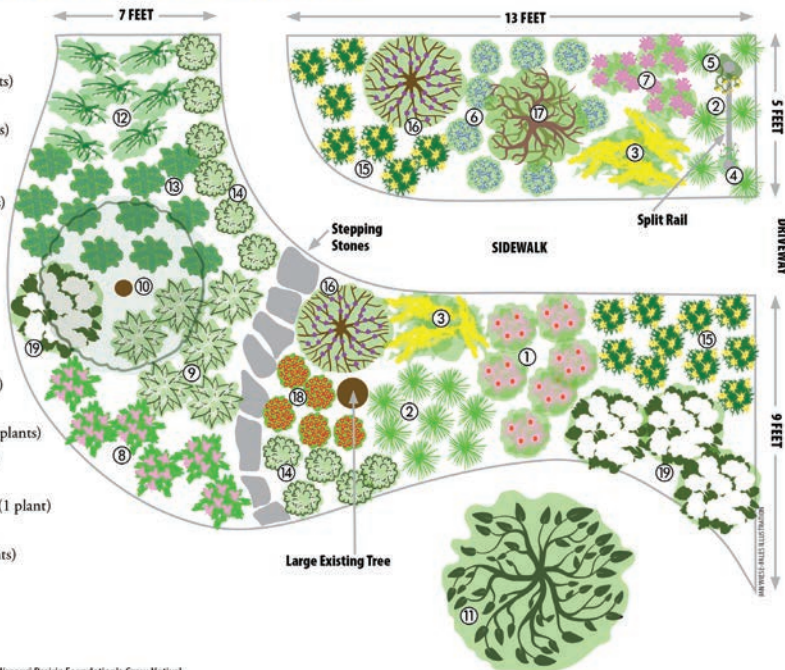

# Add natural beauty to landscapes

Would you like some inspiration on plant combinations and design when adding native plants to your garden? The Grow Native! program is here to help with more than 12 Grow Native! garden plans, ideal for average-sized yards. Designed by Scott Woodbury and illustrated by Janice Wiese-Fales, these plans will help you add beauty and sustain butterflies, birds, and more in your yard or on your property. You can access these plans on the Grow Native! website: [gownative.org/learn/native-landscape-plans/](http://gownative.org/learn/native-landscape-plans/).

## NATIVE GARDEN DESIGN: FRONT YARD FORMAL SHADE

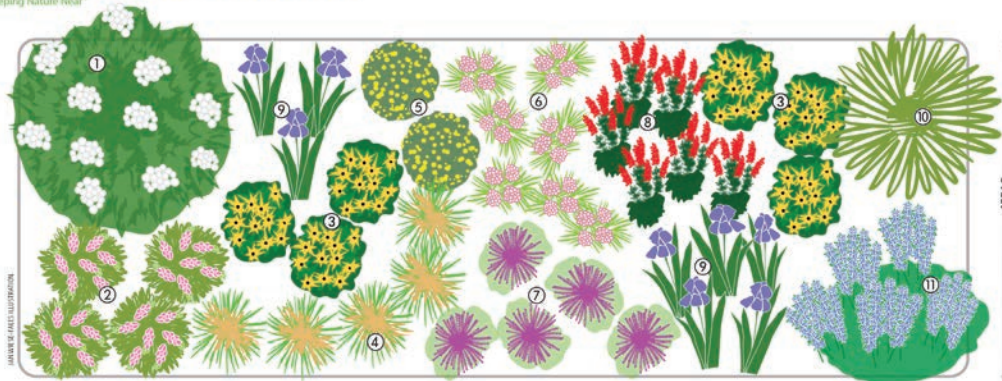

- ① Purple Coneflower (*Echinacea purpurea*) (6 plants)
- ② Oak Sedge (*Carex albicans*) (14 plants)
- ③ Cliff Goldenrod (*Solidago drummondii*) (6 plants)
- ④ Leather Flower (*Clematis pitcheri*) (1 plant)
- ⑤ Yellow Honeysuckle (*Lonicera flava*) (1 plant)
- ⑥ Virginia Bluebells (*Mertensia virginica*) (8 plants)
- ⑦ Purple Milkweed (*Asclepias purpurascens*) (3 plants)
- ⑧ Bradbury's Beebalm (*Monarda bradburiana*) (6 plants)
- ⑨ Goatsbeard (*Aruncus dioicus*) (6 plants)
- ⑩ Red Buckeye (*Aesculus pavia*) (1 plant)
- ⑪ Serviceberry (*Amelanchier arborea*) (1 plant)
- ⑫ Solomon's Seal (*Polygonatum biflorum*) (7 plants)
- ⑬ Sensitive Fern (*Onoclea sensibilis*) (12 plants)
- ⑭ Littleflower Alumroot (*Heuchera parviflora*) (11 plants)
- ⑮ Golden Groundsel (*Packera obovata*) (17 plants)
- ⑯ Beautyberry (*Callicarpa americana*) (2 plants)
- ⑰ Common Witch Hazel (*Hamamelis virginiana*) (1 plant)
- ⑱ Indian Pink (*Spigelia marilandica*) (5 plants)
- ⑲ Wild Hydrangea (*Hydrangea arborescens*) (4 plants)

This native garden design was produced by the Missouri Prairie Foundation's Grow Native! program from a design concept by Scott Woodbury, Shaw Nature Reserve. Partial funding for this garden design provided by Missouri Department of Conservation.

## NATIVE GARDEN DESIGN: RAIN GARDEN

- ① Ninebark (*Physocarpus opulifolius*) (1 plant)
- ② Rose Turtlehead (*Chelone obliqua*) (4 plants)
- ③ Orange Coneflower (*Rudbeckia fulgida* var. *umbrosa*) (6 plants)
- ④ Fox Sedge (*Carex vulpinoidea*) (5 plants)
- ⑤ Prairie Dock (*Silphium terebinthinaceum*) (2 plants)
- ⑥ Swamp/Marsh Milkweed (*Asclepias incarnata*) (7 plants)
- ⑦ Marsh Blazingstar (*Liatris spicata*) (5 plants)
- ⑧ Cardinal Flower (*Lobelia cardinalis*) (6 plants)
- ⑨ Blue Flag Iris (*Iris virginica*) (8 plants)
- ⑩ Switchgrass (*Panicum virgatum*) (1 plant)
- ⑪ Blue Lobelia (*Lobelia siphilitica*) (5 plants)

• **Percolation Test:** To ensure proper drainage in rain gardens, conduct a percolation test in the center of the rain garden before constructing. Dig a hole 12 inches deep and 6 inches wide. Fill it with water and let it drain, then fill it a second time and measure the rate the water drops. If the water drains out of the hole within 24 hours, percolation is sufficient for a rain garden. If water is still standing in the hole after 24 hours, do not construct a rain garden in this location. Select another area in your yard to conduct another percolation test.

• **Construct rain gardens** at least 10 feet down slope from any building foundation. We recommend that rain gardens be 6 to 12 inches deep. If six inches, dig out the entire area uniformly. If 12 inches, dig the center area 12 inches deep and slope the edges up to the outer limits of the planting area.

This native garden design was produced by the Missouri Prairie Foundation's Grow Native! program from a design concept by Scott Woodbury, Shaw Nature Reserve. Funding for this garden design provided by Missouri Department of Conservation.

Let your neighbors know you've planted a native garden! Grow Native! garden signs for native plantings are available in our online store at [store.moprairie.org](http://store.moprairie.org).

Additional native plant garden plans available on the Grow Native! website include: Front Yard Formal Full Sun Garden, Water Garden, Songbird Garden, Rock Garden, Frog Pond Garden, Mailbox Gardens, Shady Haven Garden, Finch Feast Garden, Butterfly Garden, and Hummingbird Haven Garden.

# Use natives for farms, stormwater management, & erosion control

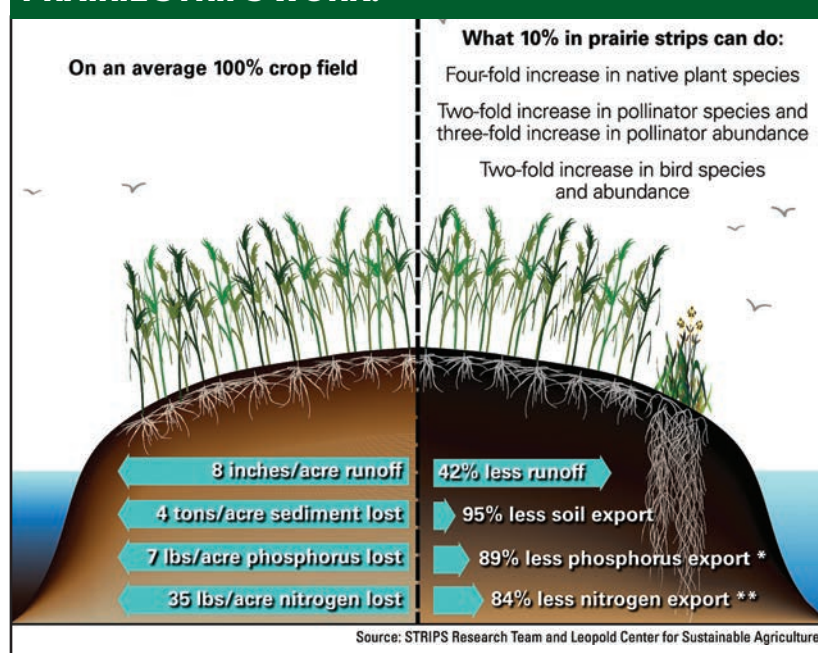

Planting strips of prairie plants along the edges of or within corn and soybean fields—even on only 10% of the area—dramatically improves water quality and habitat for pollinators and birds.

Using native plants on farms keeps productive farmland productive and protects streams—benefitting present and future generations. Grow Native! is a program of the Missouri Prairie Foundation, which has grant funds to help farmers establish prairie strips on farms.

FOR MORE INFORMATION, CONTACT  
[info@moprairie.org](mailto:info@moprairie.org)

## PRAIRIE STRIPS WORK!

\* Phosphorus moving with surface water runoff.  
\*\* Nitrogen moving with surface water runoff.

Native prairie plants provide livestock with nutritious, healthy forage that is drought-tolerant and create habitat for grassland birds and other wildlife.

## Plant natives to absorb rainwater runoff from rooftops, parking lots, and other impervious surfaces.

Directing water into the ground conserves the Earth's freshwater resources and protects streams and property from flooding. Native plants used in rain gardens and bioswales also provide habitat for pollinators, birds, and more.

A rain garden can absorb 30 percent more water than a comparable-sized parcel of turf and allows the water to slowly filter into the ground rather than run off into storm drains. A rule of thumb is to plant the square footage of your rain garden equal to at least 30 percent of the square footage of your roof. Make a shallow depression or swale at least 10 feet down slope from any building foundation and plant native wetland or moist-soil prairie plants that can accept periods of inundation.

Natives suitable for rain gardens or saturated soils include those pictured here as well as palm sedge (*Carex muskingumensis*), rose mallow (*Hibiscus lasiocarpus*), blue lobelia (*Lobelia siphilitica*), wild bergamot (*Monarda fistulosa*), Culver's root (*Veronicastrum virginicum*), swamp milkweed (*Asclepias incarnata*), and many others. Larger rain gardens can include a wetland shrub, such as buttonbush (*Cephalanthus occidentalis*). Or, for a vertical accent, try shining blue star (*Amsonia illustris*). For rain garden slopes and berms, choose low-growing natives for drier conditions.

Buttonbush  
(*Cephalanthus occidentalis*)

Orange coneflower  
(*Rudbeckia fulgida*)

Blue flag  
(*Iris virginica*)

# Native plants as food for people

From left, persimmons, pawpaws, blackberries, flowers and leaves of violets and redbud flowers, and shellbark hickory nuts are all native to the lower Midwest and provide food for people.

For thousands of years, people living in the lower Midwest depended on numerous native plants as food. Today, many people enjoy learning about and cooking with native edibles. Fruit from pawpaw and persimmon trees can be used to make puddings and other desserts, for example, as can nuts from black walnut and hickory trees. Flowers and greens from some native plants can be used in salads, stews, and other dishes. Many Grow Native! professional members listed in the Grow Native! Resource Guide sell native edibles you can grow at home. Also, explore native plant recipes, lists of native edibles, and additional resources at [grownative.org/learn/natives-for-gardening/native-edibles/](https://grownative.org/learn/natives-for-gardening/native-edibles/)

**Note:** Grow Native! resources on native edibles are intended as general information only. As with any foods, there is a potential for allergic reactions when consuming native edibles. Always seek the advice of a health professional with any questions about touching or eating any plant matter.

## The following directory provides product, service, and contact information for professional members of the Grow Native! program.

### DEFINITIONS OF DIRECTORY'S NATIVE PLANT PRODUCTS AND SERVICES

**Seeds:** Seeds of native plants for landscaping, forage, wildlife habitat, and other purposes

**Plugs:** Plants, ready for planting, growing in small cells of various sizes

**Plants:** Potted plants, ready for planting, growing in small to large containers; may be nursery inventory or custom grown

**Shrubs & Trees:** Woody plants ready to be planted—bare-root seedlings, trees, or shrubs in pots, or larger trees and shrubs dug from field production

**Land Care & Landscape Services:** Planting, establishment, and/or care of landscapes for homes, businesses, public places, and other small areas

**Landscape Architects:** Individuals who are licensed and accredited by state governments to plan landscapes in outdoor public areas, landmarks, and gardens of various sizes

**Landscape Designers:** Individuals who plan landscapes, usually residential and commercial gardens

**Arborists:** Individuals who plant, care for, and maintain individual or small numbers of trees

**Forest Management:** Evaluates forests and timber stands, creates management plans, and sometimes implements management plans

**Wildlife Habitat & Ecological Services:** Provides resource management and/or maintenance, usually for larger tracts of land

**Education:** Provides native plant specialists for educational events, organizes seminars/workshops, owns/maintains places to see native plants in gardens, restorations, and natural areas, and/or provides educational materials

**Institutional Supporter:** An institution that supports the promotion of native plants, such as a botanical institution, a non-profit organization, a business, an educational institution, or a community

**Related Products & Services:** Products and services related to native plants and their uses, including erosion control, stormwater management, revegetation products, and compost

*The Missouri Prairie Foundation and its Grow Native! program provide the Grow Native! Resource Guide as a convenience to gardeners, landowners, landscape professionals, and landscape enthusiasts. It is the responsibility of the consumer to check the references or licenses of, negotiate fees with, and make all arrangements with those listed in this Resource Guide. The Missouri Prairie Foundation and its Grow Native! program accept no responsibility for products and services rendered.*

**An online version of this guide at [grownative.org](https://grownative.org) includes links to the websites of Grow Native! professional members that sell native plant products and services.**

Missouri Prairie Foundation®  
[www.grownative.org](http://www.grownative.org)

Keeping Nature Near®

Grow Native! is a native plant marketing and education program of the Missouri Prairie Foundation. Grow Native! helps protect and restore biodiversity by increasing conservation awareness of native plants and their effective use in urban, suburban, and rural developed landscapes. Through collaboration with our professional members, consumers, private industry, non-profit organizations, and government agencies, Grow Native! aims to significantly increase the demand for and supply of native plants in the lower Midwest—Missouri, southern Illinois, eastern Kansas, and northern Arkansas.

**Questions? Call 888-843-6739 or write to [grownative@moprairie.org](mailto:grownative@moprairie.org).**

## Missouri Prairie Foundation/ Grow Native! 2023 Native Plant Sales

The Missouri Prairie Foundation is partnering with numerous hosts where Grow Native! professional members will sell a variety of native wildflowers, grasses, sedges, vines, shrubs, trees, and seeds. Before sale dates, be sure to visit [grownative.org](http://grownative.org) to confirm dates and hours, lists of vendors, pre-order information, and other details. Also, more sales may be added.

- Saturday, March 25, 10:00 a.m. to 2:00 p.m., Runge Conservation Nature Center, 330 Commerce Dr., Jefferson City, MO
- Saturday, April 8, 10:00 a.m. to 1:00 p.m., MU Bradford Research Center, 4968 S. Rangeline Rd., Columbia, MO
- Saturday, April 15, 10:00 a.m. to 2:00 p.m., Anita B. Gorman Conservation Discovery Center, 4750 Troost Ave., Kansas City, MO
